Extender Release Notes

System Requirements

The system requirements for Extender are the same as those for Microsoft Dynamics GP. You can review the Microsoft Dynamics GP System Requirements documentation on CustomerSource or PartnerSource.

Prerequisites

Installing Extender on Microsoft Dynamics GP requires that the Microsoft Dynamics GP be version 18.09.xxxx. This version is available in the October 2026 release for Microsoft Dynamics GP.

Installing

If you are currently using Microsoft Dynamics GP, you just need to run through installation steps for this new build of Extender. The documentation on how to install can be found in the Extender Manual.

Upgrading

The Extender upgrade follows the supported upgrade paths from 2018 and 2016 that are available for Microsoft Dynamics GP. You can find these on PartnerSource or CustomerSource in the Upgrading to Microsoft Dynamics GP Hot Topic.

If you are currently using Microsoft Dynamics GP 2018 or 2016, the Extender upgrade steps can be found in the Extender Manual.

As in any upgrade process, we recommend that you use a test environment to walk through the upgrade process. By doing this, you can identify and resolve any potential issues that may occur in the upgrade process. A test upgrade also allows you to lean the new features in Extender before putting it into production.

Registration Keys

After installing this Extender build, you will need the registration code for it. This code is available from your Partner or by calling eOne at 888-319-3663. If you previously had Extender installed, once you install this update, you will not need to enter new registration keys. If you had Extender 2018 or 2016 installed previously, you will need to enter in new registration keys for Extender.

Fix List

18.09.0157

- This release is a compatibility release for Extender 18.9. It allows Extender to be compatible with Microsoft Dynamics GP 18.9.xxxx. It will contain the same features/fixes as the Extender 18.8 build 18.08.0145 for Microsoft Dynamics GP 18.8 as well as the following problem report.
- CreateIndexesPerformance procedure leaves orphaned SQL connection
- Boxes displaying around field names on column 2 of on extender window
- Exporting a Window and importing it to another company only does the first 15 fields
- Extender Detail window leaves orphaned SQL spids
- Extender doesn't register global actions (triggers) against forms with spaces in them
- Calculated field in scrolling grid of Extender window does not work consistantly
- Key fields for Sales Transaction Inquiry Zoom Line_Scroll do not default properly causing error
- Extender Show Total breaks line total calculation
- Deleting extender window does not delete fields in column 2
- Extender Install and Upgrade Extender should have full row select for company list
- Remove the Extender Solution ID from the Upgrade Extender window
- Extender Enterprise Global Action Condition that restricts to an Account Number / Composite always returns true
- Extender install should default the GP install path to the default GP instance
