

# Extender 2016 Release Notes

## System Requirements

The system requirements for Extender are the same as those for Microsoft Dynamics GP. You can review the Microsoft Dynamics GP 2016 System Requirements documentation on CustomerSource or PartnerSource.

## Prerequisites

Installing Extender 2016 on Microsoft Dynamics GP requires that the Microsoft Dynamics GP be version 16.00.0404 or higher. This version is available in the RTM release for Microsoft Dynamics GP 2016.

## Installing

If you are currently using Microsoft Dynamics GP 2018, you just need to run through installation steps for this new build of Extender. The documentation on how to install can be found in the Extender Manual.

## Upgrading

The Extender upgrade follows the supported upgrade paths from 2013 and 2015 that are available for Microsoft Dynamics GP. You can find these on PartnerSource or CustomerSource in the Upgrading to Microsoft Dynamics GP 2016 Hot Topic.

If you are currently using Microsoft Dynamics GP 2013 or 2015, the Extender upgrade steps can be found in the Extender 2016 Manual.

As in any upgrade process, we recommend that you use a test environment to walk through the upgrade process. By doing this, you can identify and resolve any potential issues that may occur in the upgrade process. A test upgrade also allows you to learn the new features in Extender before putting it into production.

## Registration Keys

After installing this Extender build, you will need registration keys for it. These keys are available from your Partner or by calling eOne at 888-319-3663. If you previously had Extender 2016 installed, once you install this update, you will not need to enter new registration keys. If you had Extender 2013 or 2015 installed previously, you will need to enter in new registration keys for Extender 2016.

## New Features

### 16.00.0011

- Key Field are now available for Calculations
- Ability to create View from Extender Note Window has been added
- Features that require GP to be relaunched no longer require the relaunch
- New Indexes to improve performance

### 16.00.0028

- Disable Menu option if it does not meet the restriction
- Prefix on Extender views

### 16.00.0050

- New Field Type of URL
- Allow user to set column headings on extender views
- Show/Hide Note List fields
- Added setting to Auto Expand Detail Fields grid
- Added Event Type of Before Save
- Ability to use existing form in lookup field of another form
- Disable Button on Actions

### 16.00.0057

- Allow Extender Views to be created by db\_owners
- Extender Install automatically installs all companies at login of first company
- Message added to indicate resource already exists on xml import
- SOP and POP Copy brings Extender data along with the transaction

### 16.00.0063

- Disable option for Windows and Forms

## Fix List

### 16.00.0011

- Action to create SOP Transaction will not take unit price from the Line Item of a form.
- Using name in SLB report shows incorrectly in Extender Linked Inquiries window
- Lookups created in Extender have Hyperlink that doesn't work
- Import of an xml file creates duplicate records in the EXT20010 and EXT20502 tables
- Code fix - form ExtenderActionObject script ReplaceCurrentForm need to add check for window has details to windows section
- Using add Resource on Menu doesn't work with Navigation Lists
- When using Auto Open with Open Method as Line Change, the Field DDL is enabled when it shouldn't be
- Can't directly switch Extender window Auto Open method from Line Change to Field Enter/Exit
- Save\_Description of ExtenderDataObject\_Form does not allow for multiple keys
- Extender Detail Window - refresh scrolling window does not display lines correctly

- Extender crashes to desktop updating Form with a script on it.
- Extender window linked on SOP Number and SOP Type doesn't work
- Extender option in SmartList disappears when install SC into GP
- Extender GetFieldID of form ExtenderDataObject\_Form bug
- Not able to change series for Extender form as a SmartList
- Not replacing all instances of Form Variables
- Unable to retrieve fieldID from Extender Window - Details
- Error Creating trigger EXT00500\_UPGRADE
- Error Dropping trigger EXT00500\_UPGRADE
- SQL Insert Failure on EXT00700 and EXT00750 when upgrading from Enterprise 2010
- Extender update continues if there is an error in the Upgrade\_SQL\_Prescripts
- GetNextRecordID script on form ExtenderDataObject\_Form we should pass in all values to save the EXT\_Extender\_Activity record at that time multi-user issue
- GetNextRecordID script on form ExtenderDataObject\_Window we should pass in all values to save the EXT\_Extender\_Activity record at that time multi-user issue
- Extender Detail window linked on JE and Transaction Date won't retrieve the data.
- Extender hangs GP when posting computer check

#### **16.00.0028**

- Create Tables doesn't run Grant when switch companies instead of re-launch
- Wrong Number of parameters sent to script 'SetValueOnWindow'
- Extender hangs GP when posting computer check
- Can Save Extender Table Link without selecting a Table Field
- Create Extender window based on POP Line Scroll - get error when trying to open the window cannot find PO Number
- Description Field always required if using the field
- Extender Auto Open feature runs when not expected
- Extender Export/Import not bringing in Table Links
- Extender Form does not put back unused IDs even though option is marked
- GP hangs during posting of SOP documents that has two Extender windows on SOP Entry
- GP Script on Window close event does not run
- Refresh Scrolling window on all detail forms and detail windows add code to delete lines from temp table and add lines back to temp table
- Removing Key from Window doesn't remove key from Table Links
- Setting Auto Open on an Array field does not work
- Table Links for Payables storing Voucher Number - Work
- Having 2 unsaved Extender windows open at the same time causes incorrect Extender Record IDs to be assigned.

#### **16.00.0029**

- Extender Detail form on 16.00.0028 scrambles the detail fields with the header fields

#### **16.00.0030**

- Extender Window Group scrambles the fields between windows

#### **16.00.0050**

- Posting POP Receipt causes the the Extender "SOP Transfer" code to run

- Copy Item feature no longer copies updated Extender Data after update from 2010
- Extender function references old table EXT00400
- Exporting Solution to previous XML doesn't overwrite all of the file
- Extender Lookup to another Extender Form doesn't work from Detail Form
- Mark an Extender Detail window as read only the Save and Delete buttons are still enabled
- Importing in an Extender window that already exists write bad record to EXT00001 table
- Window Notes are not updating
- Extender import using ID's assigned from exported system
- No hyperlink or zoom on a Form Lookup type when using the form

#### **16.00.0051**

- "A get/change operation on table 'EXT\_Table\_Cache' cannot find the table" error when installing Build 50

#### **16.00.0057**

- Use a linked lookup in the form based on the ID value
- Copied Form Lookup to ExtForm stuck on previous solution form
- Export on Web Client doesn't allow to browse
- Form using 2 ID fields doesn't clear when you select different primary ID
- Unable to link Extender Window to Extender Form
- Blank Lines saving on detail grid
- Long String in Field15 won't save/update
- Extender Notes window no longer shows note if you hide any of the columns
- First note getting removed when redisplay
- Lookup restriction on date or time fields not working
- Extender Detail Forms: multiple rows entered for form detail data do not display in the UI after template executed

#### **16.00.0063**

- Importing from 2015 to 2018 groups resources wrong
- Extender windows scrambled if they are in a Windows Group after updating to 14.00.0318
- On MC form, get stuck in the Exchange Rate Entry after adding a new exchange rate.
- Extender Linked Lookup to Microsoft Dynamics GP field does not function

#### **16.00.0064**

- Extender allows close/save of Extender Detail Window when not all required fields entered
- Using default template to add data to Extender Detail Window doesn't show data on initial open

#### **18.00.0071**

- Extender Detail Window: If add new lines to scrolling window and then press Cancel, no warning is given
- Extender Detail Window: If edit an existing record and scroll window data and press cancel, EXT01110 not cleaned up

- SOP Copy feature is creating Extender data for the wrong document
- Deleting solution leaves records in the EXT01110 as orphans
- Need to add back the HotKey option on the Actions - this will go on each action since there can be multiple steps to the actions each with its own hot key.

#### **18.00.0075**

- Using the action Clear Field Values does not clear data for date field
- Extender windows with spaces or special characters in the window name throw an error when trying to create a view
- Extender display dialog doesn't run action when it is supposed to
- Extender Window report displays the fields in the order they were created, and not in Window field Order
