

SMARTCONNECT RELEASE INFORMATION 10.0.0.51

FIXES

- 1. ABILITY TO USE SMARTLISTS/SMARTLIST BUILDER AS A DATASOURCE*
The ability to build a map based upon the results of a SmartList has been rectified. You can now execute a map from within SmartLists based upon the current records in your open list.
- 2. CANNOT DEFINE A COMPANY DATABASE AS PART OF THE DATA SOURCE*
This has been resolved and you are now free to define a destination database based upon the data contained in the source file. This feature is available under the company GoTo on the map screen.
- 3. PREDEFINED FUNCTIONS WITHIN CALCULATED FIELDS AND RESTRICTIONS AREA NOT PERFORMING AS EXPECTED.*
Functions have been updated and are working by design.
- 4. UNABLE TO USE ENTITY LOOKUPS AS A KEY FIELD IN CRM DESTINATION MAPS*
You are now free to use entity lookups as key fields within maps.
- 5. ABILITY TO USE EXTENDER FORMS WITH MORE THAN 9 CHARACTERS AS A DATA SOURCE.*
This has been resolved and you are free to use existing eXtender forms as a datasource regardless of the number of characters in the ID.
- 6. GENERAL NODE MAINTENANCE.*
Clean up of node and field names as well as ordering of nodes as raised by our partners.
- 7. GLOBAL VARIABLES UNABLE TO BE USED IN DATA SOURCE QUERY*
Resolved
