

## Release Notes

### Installing

The documentation on how to install can be found in the SmartConnect Manual in the Installation Section. Please review the Installation Prerequisites before installing SmartConnect

### Upgrading

If you are currently using SmartConnect 2014 or an earlier version, SmartConnect will need to be run through the update process. The documentation on how to upgrade can be found in the SmartConnect Manual in the Installation section. Please be sure to review these steps as there is a process that needs to be followed to update correctly.

### Registration Keys

After installing this SmartConnect build, you will need registration keys for it. These keys are available from your Partner or by calling eOne at 888-319-3663.

### Fix List

#### 20.15.0.51

- 11802 - SystemPermission table error after upgrade.
- 11747 - Add compatibility for SQL 2014 in Query Builder.
- 11792 - GL inter company nodes.
- 11820 - Upgrade changes to MapLine table.

#### 20.15.0.47

##### General

- 10414 - Tasks should now display in the correct order in the map setup tab.
- 10988 - Map setup should no longer prompt users to save blank records.
- 11286 - Fixed instance where sometime emailing of process errors file on map run left an email connection open.
- 11301 - Fixed issue where importing a exported map into an older system could cause an unhandled exception.
- 11312 - Fixed issue where map run numbers were sometimes inconsistent.
- 11313 - Exception in map log window has been fixed.
- 11316 - Explicitly close SMTP connection after each email call.
- 11338 - Fixed issue where map status displayed incorrectly in management console.
- 11339 - Fixed error with some special characters in customer name on registration window.
- 11399 - Union queries should now display correctly in Query Builder.

- 11422 - SmartConnect will now check for the correct SmartConnect version before attempting to connect to the database.
- 11495 - A user assigned as a map owner can no longer be removed from user security.
- 11511 - Fixed orphan process errors sometimes left behind on map delete.
- 11517 - Fixed issue where groupings on columns that are not mapped in node mapping were sometimes lost.
- 11560 - Fixed intermittent compile issue if '\ ' was contained within a global variable.
- 11589 - Reinstated ability to drag and drop functions within the scripting window.
- 11600 - Fixed error on importing a map that contains a UNC path that does not exist on the target system.

#### **Generic Connector**

- 11246 - Fixed an error where sometimes inserts failed when inserting into a MSSQL table where the data keys were not unique.
- 11287 - Removed ability to create MSSQL real time data sources for MSSQL versions earlier than 2012.
- 11545 - Fixed incorrect messaging when writing to an Excel file that already exists.
- 11555 - Fixed truncated decimal data in Multi data sources.
- 

#### **Microsoft CRM Connector**

- 11318 - Fixed issue where a bulk destination could fail if an associated entity lookup column failed.
- 11326 - Fixed instance where a multi lookup column could fail if passing values other than source columns.
- 11577 - Fixed issue where modified user was sometimes set incorrectly via API calls.

#### **Microsoft GP Connector**

- 10427 - Blank eConnect messages are now filtered out correctly.
- 11307(8) - Fixed issue where a SmartList calling the WCF web service could sometimes call an incorrect url.
- 11383 - Fixed orphan records sometimes left behind when removing nodes in node maintenance.
- 11389 - Fixed the Extender Objects window for destinations using a defined tenant.
- 11542 - Fixed issue on map import where nodes have been duplicated and re-named in the source system.
- 11624 - Fixed issue when restricting columns for a change data source.

#### **SalesForce Connector**

- 11481 - Removed requirement to enter security token in Salesforce setup.

#### **Web Service Connector**

- 11423 - Fixed issue with <> NULL in WCF queries.
- 11480 - Double fields should now process correctly.
