

## **System Prerequisites**

- .NET Framework 3.5 must be installed on the client machine

## **System Requirements**

The system requirements for SmartView are the same as those for the version of Microsoft Dynamics GP you are using. You can review the Microsoft Dynamics GP 2013 System Requirements documentation on Microsoft's CustomerSource or PartnerSource sites. SmartView Internal does not run in the Microsoft Dynamics GP 2013 Web Client. When using the Web Client, you would need to use SmartView External.

## **Release Notes**

If you are using SmartList Builder with Microsoft Dynamics GP 2013 in conjunction with SmartView Internal (build 23 or higher), you need to ensure you are on SmartList Builder build 55 or higher.
