

SmartView 2016 Release Notes

System Requirements

The system requirements for SmartView are the same as those for Microsoft Dynamics GP. You can review the Microsoft Dynamics GP 2016 System Requirements documentation on CustomerSource or PartnerSource.

Prerequisites

- .NET Framework 4.5.1 must be installed on the client machine

Installing

If you are currently using Microsoft Dynamics GP 2016, you need to run through installation steps for this new build of SmartView as well as the Updating steps. The documentation on how to install and update can be found in the SmartView Manual.

Upgrading

The SmartView upgrade follows the supported upgrade paths from 2013 and 2015 that are available for Microsoft Dynamics GP. You can find these on PartnerSource or CustomerSource in the Upgrading to Microsoft Dynamics GP 2016 Hot Topic.

If you are currently using Microsoft Dynamics GP 2013 / 2015 or a previous release of SmartView 2016, the SmartView upgrade steps can be found in the SmartView 2016 Manual.

As in any upgrade process, we recommend that you use a test environment to walk through the upgrade process. By doing this, you can identify and resolve any potential issues that may occur in the upgrade process. A test upgrade also allows you to lean the new features in SmartView before putting it into production.

Registration Keys

After installing this SmartView build, you will need registration keys for it. These keys are available from your Partner or by calling eOne at 888-319-3663. If you previously had SmartView 2016 installed, once you install this update, you will not need to enter new registration keys. If you had SmartView 2013 or 2016 installed previously, you will need to enter in new registration keys for SmartView 2016.

Special Notes

SmartView Internal does not run in the Microsoft Dynamics GP 2016 Web Client. When using the Web Client, you would need to use SmartView External.

New Features

16.0.1

- This release is a compatibility release for SmartView 2016. It allows SmartView to be compatible with Microsoft Dynamics GP 2016.

16.0.5
