

SmartView External Release Notes

System Requirements

The system requirements for SmartView External are the same as those for Microsoft Dynamics GP release you are using. You can review the Microsoft Dynamics GP System Requirements documentation on CustomerSource or PartnerSource.

Prerequisites

- SmartView for Microsoft Dynamics GP must be installed and must be at least on version 14.00.0542 for GP 2015, 16.0.1 for GP 2016 or 18.0.1 for GP 2018.
- .NET Framework 4.5 must be installed on the client machine

Installing

If you are currently using Microsoft Dynamics GP, you just need to run through the installation steps for this new build of SmartView. The documentation on how to install can be found in the SmartView Manual in the SmartView External section.

Upgrading

The SmartView upgrade follows the supported upgrade paths from 2015 and 2016 that are available for Microsoft Dynamics GP. You can find these on PartnerSource or CustomerSource in the Upgrading to Microsoft Dynamics GP 2018 Hot Topic.

If you are currently using Microsoft Dynamics GP 2015 or 2016, the SmartView upgrade steps can be found in the SmartView 2018 Manual. You will need to be sure to update SmartView Internal before upgrading SmartView External.

As in any upgrade process, we recommend that you use a test environment to walk through the upgrade process. By doing this, you can identify and resolve any potential issues that may occur in the upgrade process. A test upgrade also allows you to lean the new features in SmartView before putting it into production.

Registration Keys

SmartView External will use the registration keys entered for SmartView Internal. Be sure that you have the SmartView Internal keys entered before installing SmartView External. If you need they Smartview keys, they available from your Partner or by calling eOne at 888-319-3663.

Special Notes

If you are using SmartList Builder with Microsoft Dynamics GP 2013 in conjunction with SmartView External (build 21 or higher), you need to ensure you are on SmartList Builder build 55 or higher.

It is always recommended that when using SmartView Internal and SmartView External together, you have the latest build of each installed to ensure that all features will work correctly in both the Internal and External installs.

If SmartView External release 2.0.44 or prior is being updated to SmartView External release 2.0.51 or newer, please take note of any Favorites that are being used in SmartView External with the Grouping Feature. Any favorites that have the grouping feature included in them, may have to be altered. A fix has been released to match up the grouping fields between Internal and External, but this may cause the favorites in External to group on incorrect fields.

New Features

2.0.44

- This release is a compatibility release for SmartView External. It allows SmartView External to be compatible with Microsoft Dynamics GP 2018. It will contain the same features/fixes as the SmartView External build 2.0.43 release.

2.0.53

- Column order on default lists

Fix List

2.0.44

- This release is a compatibility release for SmartView External. It allows SmartView External to be compatible with Microsoft Dynamics GP 2018. It will contain the same features/fixes as the SmartView External build 2.0.43 release.
