

In an effort to better serve our partner and customer community, we would like you to know about Extender changes and upcoming features to look forward to. Note that we have listed both service and feature packs below. Service pack descriptions share known issues that are fixed within that release; feature packs share new features added to the product.

---

### Service Pack 1 – August 2013

1. Interfaces not upgrading. (Enterprise)
2. CurrentID and CurrentLine not working in scripts. (Enterprise)
3. Extender form records not disabled after creating transactions. (Enterprise)
4. Allow passing of parameters in standalone actions to scripts running in other products. (Enterprise)
5. Calculated fields not displaying in reports.
6. Calculated fields not displaying in SmartList.
7. Short string formatting applied on template setup.
8. Error deleting multiple lines on detail windows & forms.
9. Don't display non-string fields in lookups.
10. Drill down on form ID when existing look up is used.
11. Special case for GL line items to set the line number before the window opens.
12. Lookup on SOP Numbers not updating when documents are transferred.
13. Additional menu items persisting when changing companies or users.

### Service Pack 2 – September 2013
