Your Questions, Answered.

What does the Number of Connections Mean?

In each plan, you'll receive a certain number of connections. This means the number of connections that can be used in each install of SmartConnect or within a SmartConnect.com environment.

Example: In the case of SmartConnect Basic Subscription Plan, SmartConnect On-Premise (4 installs) & SmartConnect.com are included. The customer has rights to:

<table>
<tr>
<td>

SmartConnect.com Environment
2 Connections

</td>
<td>

SmartConnect On-Premise
4 installs with 2 Connections per deployment

</td>
</tr>
<tr>
<td>

SmartConnect On-Premise Test Install:
Up to 2 Connections

</td>
<td>

SmartConnect On-Premise Production Install:
Up to 2 Connections

</td>
</tr>
<tr>
<td>

SmartConnect On-Premise Developmental Install:
Up to 2 Connections

</td>
<td>

SmartConnect On-Premise User Acceptance Testing Install:
Up to 2 Connections

</td>
</tr>
</table>

How are connections counted in Monthly Subscriptions?

Connections	How it's counted	Details
Dynamics 365 Business Central	Per Instance	The connection is set up with credentials to connect to your instance of Business Central and then you can integrate with multiple companies from that instance. No additional connection is required per company.
Dynamics 365 Customer Engagement	Per Instance	The connection is set up with credentials to connect to your instance of D365 Customer Engagement (or Sales, Field Service or Project Service Automation), and then you can integrate with multiple organizations from that instance. No additional connection is required per organization.
Dynamics CRM (On-Premise)	Per Instance	The connection is set up with credentials to connect to your instance of Dynamics CRM, and then you can integrate with multiple organizations from that instance. No additional connection is required per organization.

How are connections counted in Monthly Subscriptions?

Connections	How it's counted	Details
Dynamics GP	Per Instance	The connection is set up with credentials to connect to your instance of Dynamics GP and then you can integrate with multiple companies from that instance. No additional connection is required per company.
Dynamics NAV (On-Premise)	Per Instance	The connection is set up with credentials to connect to your instance of Dynamics NAV and then you can integrate with multiple companies from that instance. No additional connection is required per company.
NetSuite	Per Instance	The connection is set up with credentials to connect to your instance of NetSuite and then you can integrate with multiple companies from that instance. No additional connection is required per company.
Salesforce	Per Instance	The connection is set up with credentials to connect to your instance of Salesforce.com, and then you can integrate with multiple organizations from that instance. No additional connection is required per organization.
SQL Server	Per Instance	Can access multiple databases under one server connection
ODBC	Per Instance	Each ODBC connection setup counts as a connection in SmartConnect. For example, connecting to Access and then connecting to Quickbooks on-prem would be 2 connections. The only exception is with using an ODBC with files. Using ODBC to connect to a file is covered under the file connection count.
OLEDB	Per Instance	Each connection setup counts as a connection. For example, connecting to Access and then connecting to QuickBooks on-prem would be 2 connections.
REST Web Services	Per Provider/ Connection	Each connection built in the REST Connector will count as a connection (i.e., HubSpot and Bill.com would each be one connection).
File Connection	1st file connection counts, the rest are covered under that connection	Whatever your file type or file extract format is, we count the first connection and then you're covered to use as many files, ftp connections and ODBC connections to your files as you'd like. File types could include txt (CSV, Pipe Delimited, etc.), XML, or Excel.
