What's a connection?

A connection refers to any system that you want to integrate to or from. It may be a Dynamics 365 Sales/CRM organization, a Dynamics NAV on-premise solution, Salesforce instance or any of our available connectors. When you create that "connection" you are then able to use it in a data source or as a destination.

Please note that for files specifically, when you configure a file as an integration point (source or destination), a connection is counted the first time you are using that connection type. A file could be a Text/CSV, XML or Excel file type. After the first time a file is used, unlimited file integration is included without counting towards the connection limit by plan.

What's included in the Monthly Subscription Plan?

Dual use rights to use SmartConnect.com or SmartConnect on-premise (4 installs), so you have the choice to deploy your integrations in the cloud or on-premise. Depending on the plan, we also include other benefits for training, unlimited phone and email support, templates, and onboarding success plans.

Recommendations

Whether you have decided on an on-premise or cloud-based solution, it is highly recommended that each customer receives training and support on the products. We offer a wide variety of support and training options, as well as a service team that can act as an extension to your team if you do not have time to implement your project. Please take a look at the training, support, and service offerings for more information. If you'd like more details, please reach out to sales@eonesolutions.com.
